SnapPort®

Add an outlet to any vessel from the outside!

The SnapPort® drainage fitting features a revolutionary patented design for easy installation.

Features:

- Allows for gravity drainage of water-based liquids from a vessel or surface; when installed vertically into the bottom of a vessel or surface, the contained liquids will be completely drained.
- Unlike traditional and competing bulkhead fittings, SnapPort® does not require access to the interior of a vessel or surface for installation. Often, that access is either difficult or impossible.
- Easily installs in less than a minute.

Applications:

- For draining common container types - rain barrels, buckets, drums, holding tanks, troughs, sheet metal pans, etc., made of any rigid material from approximately 1/16 in. to 3/8 in. thick.

Requirements/Tools:

- Requires a 1 1/8 in. drilled hole.
- The SnapPort® outlet accepts 1 in. PVC pipe (for solvent welded piping extensions, if required) and a shutoff valve, if desired.

Material:

- PVC and Acetal

Contents:

- SnapPort® Spigot
- Attachment Tool
- Retainer Ring
